

SOUL WORD ANALYSIS CARD

Framework B — Spirit, Soul and Body Research Programme

Phase 1 Individual Word Analysis

SECTION 1 — WORD IDENTITY

WORD	SHAME
DATE ANALYSED	04/03/2026
REGISTRY NO.	146 of 181
SOURCE LIST	✓ High Confidence
BIBLICAL PRESENCE	✓ Strong — largest vocabulary cluster in the 181; most linguistically differentiated word to date
POLARITY	✓ Dual-valence — negative (destructive shame) and positive (redemptive shame) both present; see Sections 4 and 6

SECTION 2 — LINGUISTIC DATA

Hebrew Terms

Term	Transliteration	Gloss	Key References
■ ■ ■ ■ ■ ■ ■ ■	bosh	to be ashamed; put to shame (verb)	Gen 2:25; Psa 25:2–3; Isa 29:22; Joel 2:26–27
■ ■ ■ ■ ■ ■ ■ ■	boshet	shame (noun — the state/condition)	1Sa 20:30; Jer 3:24–25; Hos 9:10; Zep 3:5
■ ■ ■ ■ ■ ■ ■ ■	bushah	shame (noun — covering shame)	Psa 89:45; Eze 7:18; Obad 10; Mic 7:10
■ ■ ■ ■ ■ ■ ■ ■ ■	boshnah	put to shame (rare intensive form)	Hos 10:6
■ ■ ■ ■ ■ ■ ■ ■ ■	kelimmaḥ	shame, disgrace, reproach (relationship)	1Sa 44:15; Isa 50:6; 61:7; Jer 3:25; Eze 16:52
■ ■ ■ ■ ■ ■ ■ ■ ■ ■	kelimmut	humiliation, disgrace (abstract noun)	Job 20:3
■ ■ ■ ■ ■ ■ ■ ■	kalam	to be humiliated, put to shame (verb)	Ezr 9:6; Eze 36:32; 43:10–11
■ ■ ■ ■ ■ ■ ■ ■ ■	cherpah	reproach, taunt, disgrace (social shame)	Gen 30:23; Jos 5:9; Psa 69:19–20; Isa 25:8
■ ■ ■ ■ ■ ■ ■ ■	qalon	dishonour, disgrace (loss of honour)	Pro 3:35; 11:2; 13:18; Hos 4:7
■ ■ ■ ■ ■ ■ ■ ■ ■ ■	qiqalon	utter disgrace / shameful exposure	Hab 2:16
■ ■ ■ ■ ■ ■ ■ ■	chapher	to be ashamed, confounded	Psa 34:5; Isa 33:9
■ ■ ■ ■ ■ ■ ■ ■	chasad	to shame / act disgracefully (rare)	Pro 25:10; Lev 20:17
■ ■ ■ ■ ■ ■ ■ ■	chesed	disgrace (negative use — unusual)	Lev 20:17; Pro 14:34
■ ■ ■ ■ ■ ■ ■ ■	charaph	to taunt, reproach, defy	1Sa 17:10,25,36,45; Psa 42:10; 74:18
■ ■ ■ ■ ■ ■ ■ ■	buz	contempt, scorn	Job 12:5,21; Psa 31:18; 107:40; 123:3–4
■ ■ ■ ■ ■ ■ ■ ■ ■	ba'ash	to stink — olfactory metaphor for shame	Exo 5:21; 2Sa 10:6; 16:21; Psa 38:5
■ ■ ■ ■ ■ ■ ■ ■	za'am	indignation — divine shame-response	Exo 15:26 Cross-reference: Abomination card

Greek Terms

Term	Transliteration	Gloss	Key References
αἰσχύνῃ	aischune	shame, disgrace (noun — the state)	Luk 14:9; Phil 3:19; Heb 12:2; Rev 3:18

αἰσχύνω	aischuno	to be ashamed (verb)	Luk 16:3; Phil 1:20; 1Pe 4:16; 1Jo 2:28
αἰσχροῦς	aischros	shameful (adjective)	1Cor 11:6; 14:35; Eph 5:12; Tit 1:11
ἐντροπή	entrope	redemptive shame — shame that leads to change	1Cor 15:34
ἐντροπή	entrope	to cause shame that leads to change	1Cor 4:14; 2Th 3:14; Tit 2:8; Heb 12:9
κατασχύνω	kataischuno	to put to shame / not be put to shame	Rom 5:5; 9:33; 10:11; 1Cor 1:27; 1Pe 2:6
τιμία	atimia	dishonour, disgrace (loss of status)	Rom 1:26; 1Cor 15:43; 2Cor 6:8
τιμίζω	atimazo	to dishonour, treat shamefully	Act 5:41; Rom 1:24; 2:23; Jam 2:6
σχημωσμένη	aschmosune	indecent, shameful exposure	Rom 1:27; Rev 16:15
παλινω	apalge	to become callous — loss of shame capacity	Eph 4:19
παραδειγματίζω	paradeigmatizo	to disgrace publicly, expose to contempt	Heb 6:6
βρίζω	hubrizo	to mistreat, insult, treat with contempt	Luk 18:32; Act 14:5; 1Th 2:2
παναίσχυντο	apanaischunteo	to cast shame / act shamelessly	Rare NT usage

SECTION 3 — DIMENSION TAGS

Biblical / Theological	✓ Moral ✓ Covenantal ✓ Wisdom ✓ Prophetic ✓ Eschatological NOTE: Shame appears across every biblical genre — it is one of the most theologically distributed words in the 181
Soul Faculty	✓ Affective (primary — shame as emotion) ✓ Moral-conscience (self-evaluative shame) ✓ Relational (social shame) ✓ Cognitive (shame affecting self-concept and memory) ✓ Volitional (shame driving or preventing action) ✓ Existential (Dan 12:2 — everlasting shame)
Psychological	✓ Emotion (core shame affect) ✓ Self-concept (identity disruption) ✓ Attachment (shame in relational rupture) ✓ Trauma-response (toxic shame patterns) ✓ Regulation (shame as behavioural regulator) ✓ Motivation (approach/avoidance)
Neurological	✓ Prefrontal (self-evaluation, moral reasoning) ✓ Limbic (amygdala — threat response) ✓ Autonomic (blushing, withdrawal, freeze) ✓ HPA-axis (chronic shame = cortisol dysregulation) ✓ Mirror-neuron (social shame — others' evaluation) ✓ Neuroplastic (shame-induced structural change)
Physiological	✓ Cardiovascular (blushing, elevated heart rate) ✓ Endocrine (cortisol, adrenaline) ✓ Muscular (collapse posture, hiding, withdrawal) ✓ Epigenetic (High confidence — see Section 7)
Social / Relational	✓ Self-directed (internal shame — Ezr 9:6) ✓ God-directed (shame before God) ✓ Other-directed (social/public shame) ✓ Communal (national shame — Jer 51:51; Dan 9:7–8)

SECTION 4 — SEMANTIC RANGE

The English word 'shame' conceals one of the richest and most differentiated vocabulary clusters in the Hebrew Bible. At least seventeen distinct Hebrew roots and forms carry shame-related meaning, and the Greek NT adds thirteen more — making shame the most linguistically complex word encountered so far in this analysis. This linguistic density reflects the centrality of shame to biblical anthropology. The primary root **bosh** (בֹּשֶׁת) is predominantly experiential — the inner state of being ashamed — but its most theologically significant use is in the negative: 'those who wait on you will not be put to shame' (Psa 25:3; Joel 2:26–27; Isa 49:23; Rom 5:5; 10:11). This pattern — shame cancelled by trust in God — is one of the most frequent promises in the entire Old and New Testaments, making **bosh/kataischuno** a covenantal category as much as a psychological one. Critically, the Greek NT introduces a distinction absent from the English word: **aischune** (disgrace-shame, primarily negative) versus **entropē** (shame that turns — redemptive, corrective shame). Paul deploys **entropē** deliberately in 1Cor 6:5 and 15:34 — not to wound but to awaken. Heb 12:2 adds a third dimension: Jesus 'despised the shame' of the cross — shame was real, was endured, and was overcome. This is not shame-avoidance but shame-transcendence through purposeful suffering. **Kelimmah** (כְּלִמָּה) carries the relational-social dimension: shame arising from what others have done to you, or what your sin has cost you in community standing. It is frequently found in lament contexts (Psa 44:15; 69:19) and in the prophetic promise of reversal: 'instead of your shame, a double portion' (Isa 61:7). **Cherpah** (חֶרְפָּה) is the taunt-shame dimension — the wound inflicted by another's verbal attack — and is the word associated with Christ's suffering in Psa 69. The olfactory metaphor **ba'ash** (stench) confirms that the **ba'ash** / **abomination** link identified in the previous card operates in both directions: the two word-groups share neural and linguistic roots. The most theologically significant single entry is **apalge** (ἀπαλγῶ, Eph 4:19): 'having become callous.' This describes the loss of the shame-capacity — the soul that can no longer feel the signal. It is the NT equivalent of Jer 6:15 / 8:12 (unable to blush), and it directly confirms the **abomination** card's core finding: the shame-faculty and the abomination-faculty are linked, and both can be disabled.

SECTION 5 — KEY VERSES

Eight verses selected to represent the full typology: original shame, covenantal shame, social shame, redemptive shame, shame-transcendence, and shame-removal.

VERSE 1	Genesis 2:25
Text	"And the man and his wife were both naked and were not ashamed."
Context Type	✓ Covenantal ✓ Individual-internal ✓ Relational
Human Impact	The original state of the soul: full exposure without shame. Shame is conspicuously absent — its absence is noted, implying that its later presence is the anomaly. Nakedness-without-shame is the pre-fall condition of the soul: full transparency before God and other with no threat to identity.
Direction	✓ God-directed ✓ Other-directed ✓ Self-directed
Observation	The foundational datum: shame is not an original feature of the soul. It enters with the fall (Gen 3:7 — "they knew they were naked"). Framework B must account for shame as an intrusion into the soul's original relational architecture, not a permanent design feature.

VERSE 2	Ezra 9:6
Text	"O my God, I am ashamed and blush to lift my face to you, my God, for our iniquities have risen higher than our heads, and our guilt has mounted up to the heavens."
Context Type	✓ Covenantal ✓ Individual-internal ✓ Communal
Human Impact	Ezra's shame is not self-condemning paralysis — it is shame as appropriate moral response to recognised covenant failure. The posture (face downward) and the blush are physiological markers of the shame-response functioning correctly in the regenerate soul. This is healthy shame: relational, proportional, and directed toward God rather than collapsing inward.
Direction	✓ God-directed ✓ Self-directed ✓ Communal (on behalf of the people)
Observation	This is the gold-standard biblical portrait of redemptive shame. The soul knows what it has done, feels the weight proportionally, and directs the shame upward toward God rather than inward toward self-destruction. Compare with the toxic inversion in Jer 6:15 (no capacity to blush).
VERSE 3	Jeremiah 6:15 / 8:12
Text	"Were they ashamed when they committed abomination? No, they were not at all ashamed; they did not know how to blush."
Context Type	✓ Prophetic ✓ Moral failure ✓ Communal
Human Impact	The double occurrence (Jer 6:15 and 8:12 — identical text) signals emphasis. The shame-faculty has been completely disabled. The physiological signal — blushing — is specifically named as absent. This is not suppressed shame but the destruction of the capacity itself.
Direction	✓ Self-directed (absent) ✓ Communal
Observation	CROSS-REFERENCE CONFIRMATION: This is the direct link to the abomination card (Section 10, flag 2). The two cards now mutually confirm: abomination-faculty failure and shame-faculty failure co-occur. The soul that cannot detect abomination also cannot blush. They are aspects of the same moral-conscience system. Neurologically: anterior insula hypoactivation in both.
VERSE 4	Hebrews 12:2
Text	"...looking to Jesus, the founder and perfecter of our faith, who for the joy that was set before him endured the cross, despising the shame, and is seated at the right hand of the throne of God."
Context Type	✓ Eschatological ✓ Covenantal ✓ Individual-internal
Human Impact	Christ experiences real shame (aischune) — public exposure, nakedness, social humiliation, dehumanisation. He neither denies it nor is destroyed by it. He "despises" it — holds it in its proper place relative to the joy ahead. This is shame-transcendence, not shame-avoidance.
Direction	✓ God-directed ✓ Other-directed ✓ Internally-generated (chosen endurance)
Observation	This verse provides the christological pattern for Framework B's treatment of shame. The redeemed soul's relationship to shame is not elimination but reorientation: shame can be endured without being defining. The resurrection inverts shame's verdict. This is the counter-pattern to Phil 3:19 (those who "glory in their shame" — shame as identity).

VERSE 5	Joel 2:26–27
Text	"You shall eat in plenty and be satisfied... and my people shall never again be put to shame... and my people shall never again be put to shame."
Context Type	✓ Prophetic ✓ Eschatological ✓ Covenantal
Human Impact	The double repetition of "never again be put to shame" is deliberate and structurally significant. Shame-removal is the eschatological promise. God's covenant faithfulness is expressed as permanent shame-cancellation. The promise recurs across Isaiah (49:23; 54:4; 61:7), Ezekiel (36:15), Romans (5:5; 10:11) and 1 Peter (2:6).
Direction	✓ God-directed ✓ Communal
Observation	The most frequent single promise in the entire shame vocabulary cluster is: those who trust God will not be put to shame. This is not a minor comfort text — it is a structural theological commitment running from Joel through Paul. Shame-removal is constitutive of salvation.
VERSE 6	Isaiah 61:7
Text	"Instead of your shame there shall be a double portion; instead of dishonor they shall rejoice in their lot; therefore in their land they shall possess a double portion."
Context Type	✓ Prophetic ✓ Eschatological ✓ Covenantal
Human Impact	Shame is not merely removed — it is inverted and doubled into blessing. The vocabulary here (kelimmah — relational shame; qalon — loss of honour status) is the social-covenantal register. God's restoration addresses not only inner shame-feeling but public shame-status.
Direction	✓ God-directed ✓ Communal ✓ Other-directed (public restoration)
Observation	This verse distinguishes internal shame-experience from external shame-status. Biblical restoration addresses both. Modern psychology primarily addresses subjective shame-feeling; the biblical framework includes restoration of honour in community — a dimension largely absent from clinical approaches.
VERSE 7	Philippians 3:19
Text	"Their end is destruction, their god is their belly, and they glory in their shame, with minds set on earthly things."
Context Type	✓ Moral failure ✓ Individual-internal ✓ Eschatological
Human Impact	The inversion of the shame-faculty: what should produce shame now produces glory. This is the most acute form of the Jer 6:15 pattern — the soul not only loses shame but actively celebrates what should shame it. The faculty is not merely disabled but reversed.
Direction	✓ Self-directed ✓ God-directed (in opposition)
Observation	Three shame-faculty states are now visible across the data: (1) functioning correctly — Ezr 9:6; (2) disabled — Jer 6:15; (3) inverted — Phil 3:19. This typology is a significant Framework B finding. The soul's shame-faculty can be calibrated, broken, or perverted — three distinct pathological states with different implications for transformation.

VERSE 8	Ezekiel 43:10–11
Text	"...describe to the house of Israel the temple, that they may be ashamed of their iniquities; and they shall measure the plan. And if they are ashamed of all that they have done, make known to them the design of the temple..."
Context Type	✓ Prophetic ✓ Covenantal ✓ Liturgical
Human Impact	Shame is here the gateway to restoration. The vision of the temple is withheld until shame is present — and then released when it is. Shame functions as a diagnostic criterion: its presence indicates the soul's conscience is alive. Significantly, kalam (humiliation shame) is the root here, not boshet — it is the shame of self-confrontation, not social exposure.
Direction	✓ God-directed ✓ Self-directed ✓ Internally-generated
Observation	This is the most striking use of shame in the prophetic literature: shame as the precondition for receiving revelation. The soul that cannot be ashamed cannot receive the blueprint for restoration. Shame-capacity is epistemologically significant — it opens the soul to God's instruction. Connects directly to Eze 36:31–32 (cross-reference to abomination card).

SECTION 6 — SOUL FUNCTION IN FRAMEWORK B

Soul Faculty Engaged	<i>Affective (primary — shame as core emotion), Moral-conscience (shame as self-evaluative signal), Relational (social shame and honour/status), Cognitive (shame affecting self-concept, memory, and identity), Volitional (shame driving avoidance or transformation), Existential (Dan 12:2).</i>
Framework B Contribution	<i>Shame is the soul's primary self-signal of moral misalignment — the internal alarm that registers the gap between who the soul is and who it is designed to be. Its original absence (Gen 2:25) marks the soul's pre-fall integrity; its presence after the fall marks the soul's moral awareness; its destruction (Jer 6:15; Eph 4:19) marks the soul's deepest pathology; its redemptive form (entropé, Eze 43:10) marks the soul's openness to transformation.</i>
Regenerate Expression	<i>The Spirit-restored soul carries functional shame: it can blush (Ezr 9:6), it loathes its past (Eze 36:31–32), it receives correction through entropé (1Cor 6:5), and it does not glory in what should shame it (contra Phil 3:19). Crucially, it is freed from toxic shame by the promise of non-shaming trust (Rom 5:5; 10:11) — it no longer fears being "put to shame" by God because the verdict has been reversed in Christ (Heb 12:2).</i>
Unregenerate Expression	<i>Three pathological states identified: (1) Disabled shame — the soul that cannot blush (Jer 6:15/8:12; Eph 4:19/apalge■); (2) Inverted shame — glorying in what should shame (Phil 3:19); (3) Toxic shame — shame that collapses inward into identity-destruction rather than redirecting upward toward God. The third is the subtlest: it mimics healthy shame but produces paralysis rather than transformation.</i>

SECTION 7 — NEUROSCIENCE & PSYCHOLOGY

Brain Regions / Systems	<i>Shame is one of the most extensively researched moral emotions in neuroscience. Key regions: Anterior cingulate cortex (self-monitoring, error detection), medial prefrontal cortex (self-referential processing, identity threat), anterior insula (interoceptive awareness — the "felt" quality of shame), amygdala (threat/fear response), and the default mode network (self-narrative disruption in shame states). Research: Takahashi et al. (2004) demonstrated distinct neural activation for shame vs. guilt. Tangney, Stuewig & Mashek (2007, Ann Rev Psychol) provides comprehensive review. Gilbert (2002) — shame and the social mentality.</i>
-------------------------	---

Physiological Markers	<i>Acute shame: blushing (peripheral vasodilation — consistent with biblical "blush" language, Jer 6:15), gaze aversion, postural collapse (hunching, hiding), elevated cortisol, heart rate increase, voice changes (quieting). Chronic shame: HPA-axis dysregulation, elevated baseline cortisol, immune suppression, sleep disruption. The Psa 22:15 description ("strength dried up like a potsherd") and Psa 38:5 ("wounds stink") are consistent with chronic shame physiology.</i>
Psychological Framework	<i>Shame vs. guilt distinction (Lewis 1971; Tangney 1990): guilt = "I did something bad"; shame = "I am bad" — identity-level threat. This maps precisely onto the biblical entropé (corrective, action-focused) vs. boshet-as-identity-collapse distinction. Nathanson's Compass of Shame (1992): four responses — withdrawal, avoidance, attack self, attack other — all visible in the biblical data. Attachment theory (Schoore 1994): shame is the primary affect of early relational misattunement. Trauma: Brown (2010, 2012) — shame is the primary driver of disconnection and is healed in empathic connection.</i>
Behavioural Signature	<i>Hiding (Gen 3:8 — though the word there is different, the pattern is the same), gaze aversion, postural collapse, social withdrawal, silence (Eze 16:63 — "never open your mouth again"), covering the face/head (Jer 14:3; Eze 7:18). When inverted: boasting, exhibitionism, aggression (the "attack other" shame-defence). When disabled: moral indifference, brazenness (Jer 3:3 — "forehead of a whore; you refuse to be ashamed").</i>
Epigenetic Potential	<i>✓ High confidence — Shame-related chronic stress is among the best-documented epigenetically transmissible states. NR3C1 (glucocorticoid receptor) methylation from early shame/trauma experiences is well-established (Meaney & Szyf, 2005; McGowan et al., 2009). The biblical pattern of generational shame (Jer 31:29; Eze 18:2; Dan 9:7–8 — "our fathers sinned, we bear the shame") maps onto epigenetic inheritance of stress dysregulation with precision. This is one of the strongest epigenetic candidates in the entire 181.</i>
Confidence Level	<i>✓ High — shame neuroscience and psychology are among the most extensively researched areas in affective neuroscience and clinical psychology. The biblical data maps with exceptional precision onto the research findings.</i>

SECTION 8 — BIBLICAL vs MODERN PSYCHOLOGY

Biblical Grounding	<i>✓ Direct words exist — multiple terms across both Testaments with fine-grained distinctions between shame types that modern psychology has only recently begun to articulate.</i>
Modern Construct Gap	<i>Modern psychology has developed the shame/guilt distinction (Lewis, Tangney) and the healthy/toxic shame distinction (Bradshaw 1988; Brown 2010) — but these are relatively recent. The biblical vocabulary anticipated these distinctions by millennia: entropé vs. aischune maps directly onto the healthy/toxic shame distinction. The most significant gap: psychology has no category equivalent to the "never be put to shame" promise — the covenantal guarantee of shame-removal through trust. Psychology can reduce shame; scripture promises its eschatological abolition.</i>
Convergence Points	<i>(1) Both identify shame as identity-level threat, not merely behavioural guilt. (2) Both recognise shame as potentially healthy (corrective) or toxic (identity-destroying). (3) Both identify empathic connection as the primary healing agent (Brown: "shame cannot survive being spoken"; scripture: God's steadfast love received in covenant). (4) Both document shame's physiological signature (blushing, postural collapse). (5) Both recognise the destruction of the shame-capacity as pathological (apalge■, psychopathy/antisocial personality).</i>

Divergence Points	<i>Psychology treats shame as purely an evolved social emotion; scripture treats it as a response to actual moral reality and to a divine Evaluator. The healing of shame in psychology is primarily relational-horizontal (empathy from others); in scripture it is primarily vertical (God's verdict of non-shaming). The eschatological dimension is entirely absent from psychology — Dan 12:2 (everlasting shame vs. everlasting life) has no psychological equivalent. Finally, the concept of voluntary shame-endurance for redemptive purpose (Heb 12:2) is foreign to psychological frameworks, which treat shame primarily as a problem to be resolved.</i>
--------------------------	---

SECTION 9 — RELATED WORDS (from the 181)

Intensifies / Generates	<i>Guilt (73) — shame's judicial companion; Grief (72) — shame often triggers grief over identity loss; Despair (44) — toxic shame collapses into hopelessness; Fear (61) — social shame activates fear of exposure; Condemnation (24) — shame's verdict form.</i>
Opposes / Resolves	<i>Hope (78) — the "will not be put to shame" promise runs through hope vocabulary; Repentance (135) — entropé-shame leads directly to repentance; Dignity (47) — God's restoration of honour inverts shame-status; Forgiveness (65) — covenantal shame-removal; Worth (177) — identity restoration counters shame's identity-attack.</i>
Co-occurs With	<i>Abomination (1) — confirmed bidirectional link (Jer 6:15; Eze 36:31–32); Reproach (cherpah) — social shame and taunt frequently paired; Humility (80) — healthy shame and humility share posture and function; Nakedness — the shame-exposure metaphor runs throughout prophetic literature; Pride (123) — shame and pride are antithetical soul-orientations.</i>
Registry Numbers	<i>1 (abomination), 24 (condemnation), 44 (despair), 47 (dignity), 61 (fear), 65 (forgiveness), 72 (grief), 73 (guilt), 78 (hope), 80 (humility), 123 (pride), 135 (repentance), 177 (worth)</i>

SECTION 10 — OPEN QUESTIONS & FLAGS

1. CROSS-REFERENCE CONFIRMED: Jer 6:15/8:12 directly confirms the abomination card's Section 10 Flag 2. Shame-faculty failure and abomination-faculty failure are co-occurring and co-dependent. Both cards should be updated with a mutual cross-reference note. This is the first confirmed inter-card finding in the analysis. 2. THREE-STATE TYPOLOGY — FRAMEWORK B FLAG: The shame data reveals three distinct states of the soul's shame-faculty: (a) Functioning — Ezr 9:6; (b) Disabled — Jer 6:15; Eph 4:19; (c) Inverted — Phil 3:19. This typology should be carried forward as a structural category for all subsequent moral-emotion words (anger, guilt, grief, fear). It may be a universal pattern for the soul's evaluative faculties in Framework B. 3. ENTROPE vs AISCHUNE DISTINCTION: The Greek distinction between corrective shame (entropé) and disgrace-shame (aischune) is one of the most important NT anthropological distinctions in the entire vocabulary. It requires a dedicated subsection in the Framework B writing. No single English word covers both. 4. GENERATIONAL SHAME: Dan 9:7–8 (communal/generational shame) and the epigenetic findings create a directly testable link between the biblical concept of inherited shame and epigenetic transmission of stress dysregulation. Flag for Phase 2 epigenetic analysis set. 5. SHAME AS EPISTEMOLOGICAL GATEWAY (Eze 43:10–11): The finding that shame is the precondition for receiving revelation is theologically significant and underexplored. This requires further exegetical development in the Framework B writing — it connects shame directly to the transformation vector. 6. PHASE 2 FLAGS: (a) Polarity cross-analysis — dual-valence word; (b) Neuroscience set — strongest epigenetic candidate so far; (c) Relational-cluster analysis with abomination (1), guilt (73), hope (78); (d) Frequency analysis — shame vocabulary is the largest cluster encountered; this should be quantified in Phase 2.
--
