

SOUL WORD ANALYSIS CARD

Framework B — Spirit, Soul and Body Research Programme

Phase 1 Individual Word Analysis

SECTION 1 — WORD IDENTITY

WORD	ANGER
DATE ANALYSED	04/03/2026
REGISTRY NO.	4 of 181
SOURCE LIST	✓ High Confidence
BIBLICAL PRESENCE	✓ Strong — pervasive across all genres; uniquely the most theologically significant dual-referent in the OT (divine anger is the dominant usage)
POLARITY	✓ Dual-valence — holy/righteous anger (positive; divine and human) and sinful anger (negative; self-serving wrath). This is the primary test of the three-state typology identified in the moral-conscience synthesis.
DATA NOTE	STEP export: NT-heavy (5 Greek entries). Hebrew entries in Combined Reference listed only 3 roots. Additional well-attested OT roots incorporated from exegetical knowledge and flagged as such in Section 2.

SECTION 2 — LINGUISTIC DATA

Hebrew Terms

NOTE: Combined Reference supplied 3 Hebrew roots (aph, chemah, qatsaph). The following additional roots are incorporated from exegetical knowledge; all are well-established in Hebrew lexica (BDB, HALOT) and are essential for a complete analysis. They are flagged [E] to distinguish them from STEP-sourced entries.

Term	Transliteration	Gloss	Key References / Note
אָפּ	aph	nostril/face; anger (metonymy of flare)	Gen 27:15; Exo 32:10; Num 25:3; Psa 2:12; Pro 22:24 — STEP sourced
חֵמָה	chemah	heat, burning rage, poison-fury	Pro 15:1; Eze 5:15; Psa 6:1; 38:1; Dan 11:44 — STEP sourced
קָצַף	qatsaph	to be angry, burst out in wrath (verb)	Num 31:14; Isa 54:9; 57:16,17; Zec 1:2,15 — STEP sourced
חָרָה	charah	to burn, be kindled with anger [E]	Gen 4:5–6; 18:30,32; 31:36; 34:7; 44:18; Psa 18:8
עָרָה	evrah	wrath, overflow — outpouring of anger [E]	Psa 78:49; 90:9,11; Pro 11:4; Isa 13:9; Eze 7:19; Zep 1:15
זָאָם	za'am	indignation, burning divine displeasure [E]	Psa 7:11; 38:3; 69:24; Isa 10:5,25; Nah 1:6; Hab 3:12
כָּאָס	ka'as	vexation, provocation — anger aroused [E]	1Ki 15:30; 21:27; Ecc 7:3,9; Pro 12:16; 17:25; 21:19
רָגַז	rogez	trembling rage, agitation, quivering anger [E]	Job 17; 37:2; Isa 14:3; Hab 3:2; Eze 16:43
אַנָּף	anaph	to be angry — rare intensive verb [E]	Deu 1:37; 4:21; 9:8,20; 1Ki 8:46; Psa 60:1; 79:5

Greek Terms

Term	Transliteration	Gloss	Key References / Note
ὀργή	orge	anger, wrath — settled disposition, stubbornness	Rev 19:15; Eph 4:26,31; Jas 1:19–20; Rev 6:16–17 — STEP sourced
θυμός	thumos	passion, rage — sudden fierce outburst	Gal 5:20; Rev 16:19; 19:15; 2Cor 12:20; Heb 11:27 — STEP sourced
παροργισμός	parorgismos	provoked anger — anger stirred by another's action	Eph 4:26 — STEP sourced
παροργίζω	parorgizo	to provoke to anger (causative verb)	Rom 10:19; Eph 6:4 — STEP sourced

■ργίζω	orgizo	to be angry (verb — orge in action)	Mat 5:22; 18:34; 22:7; Luk 15:28; Rev 12:17 — STEP sourced
■ργίλος	orgilos	quick-tempered, prone to anger (character trait)	STEP sourced
■γανακτέω	aganakteo	to be indignant, feel righteous displeasure	Mat 23:24; 21:15; 26:8; Mar 10:14,41; 14:4; Luk 13:14
■μβριμόμαι	embrimaomai	to be deeply moved with anger/indignation	Mat 23:23; 14:5; Joh 11:33,38 — Jesus at the tomb

SECTION 3 — DIMENSION TAGS

Biblical / Theological	✓ Moral ✓ Covenantal ✓ Wisdom ✓ Prophetic ✓ Eschatological NOTE: Divine anger (orge theou) is the dominant theological usage in both Testaments — anger is primarily a divine attribute before it is a human experience
Soul Faculty	✓ Affective (primary — anger as emotion/passion) ✓ Moral-conscience (righteous anger) ✓ Volitional (anger driving action — justice-seeking or self-serving) ✓ Relational (anger as response to relational violation) ✓ Cognitive (anger affecting judgment)
Psychological	✓ Emotion (core affect) ✓ Motivation (approach/attack) ✓ Regulation (anger management) ✓ Attachment (anger in relational rupture) ✓ Self-concept (righteous vs. narcissistic anger) ✓ Cognition (anger distorts judgment — Pro 14:29; 29:22)
Neurological	✓ Limbic (amygdala — primary anger initiation) ✓ Prefrontal (regulation, suppression) ✓ Autonomic (sympathetic activation — fight response) ✓ HPA-axis (chronic anger = cortisol) ✓ Hypothalamus (rage circuit) ✓ Mirror-neuron (empathic anger — aganakteo)
Physiological	✓ Cardiovascular (elevated heart rate, blood pressure — aph: flared nostrils) ✓ Endocrine (adrenaline surge, testosterone) ✓ Muscular (tension, aggression posture) ✓ Epigenetic (possible — chronic anger stress; intergenerational wrath patterns in OT)
Social / Relational	✓ God-directed (divine anger as covenantal response) ✓ Self-directed (internal anger) ✓ Other-directed (interpersonal anger) ✓ Communal (national/generational wrath)

SECTION 4 — SEMANTIC RANGE

Anger presents the most theologically charged dual-referent structure in the 181 so far — more demanding even than the gaon dual-referent in pride. The primary usage in both Testaments is divine: God's wrath (orge theou, aph YHWH, evrat El) dominates the anger vocabulary. This means anger names a perfection of God before it names a human experience, and any analysis of human anger must account for this prior divine referent. The Hebrew vocabulary distinguishes at least eight dimensions of anger: aph (the somatic root — flared nostrils as the body's anger signature) covers the widest range and is most frequently applied to God; chemah (heat, burning) carries the intensity and danger of uncontrolled fire; evrah (overflow) describes anger that exceeds normal containment and floods destructively; za'am (divine indignation) is almost exclusively used of God's response to specific covenant violations; charah (kindling) describes the moment of ignition; ka'as (vexation) is the anger of provocation and grievance, frequently associated with idolatry provoking God; rogez carries the physical trembling quality of barely-contained fury; qatsaph describes the explosive outburst. The Greek NT makes the most important distinction in the entire vocabulary: orge vs. thumos. Orge is settled, purposive anger — the disposition of a righteous will that remains steadily opposed to what is wrong. Thumos is the sudden flare, the passionate outburst, the emotion that ignites and subsides. Crucially, Ephesians 4:26 (parorgismos) and 4:31 (orge and thumos) treat them differently: the believer is commanded to 'be angry' (present imperative — sustained righteous orge is permissible and sometimes obligatory) but simultaneously warned against unresolved anger and the thumos-flash. The distinction maps onto divine wrath (always orge, never thumos — it is settled, not reactive) vs. human passion. Mark 3:5 is the most exegetically significant verse in the data: Jesus is described as looking around with orge, grieved at their hardness of heart. Divine anger and grief co-present in Jesus simultaneously. This is the NT's clearest portrait of holy anger — it is not cold judicial condemnation, nor uncontrolled outburst, but purposive moral emotion inseparable from sorrow. It is the anger of someone who cares deeply about what is being violated. James 1:20 introduces a critical limitation: 'the anger of man does not produce the righteousness of God.' Human anger, even when directed at genuine injustice, is structurally unreliable as a vehicle for God's purposes. This is not a prohibition of all anger but a diagnosis of anger's inherent vulnerability to distortion in the fallen soul.

SECTION 5 — KEY VERSES

Eight verses selected to cover: holy divine anger, embodied anger (somatic), righteous human anger, anger co-present with grief, anger as commanded, anger's limitation, quick-temperadness as disqualifying, and eschatological wrath.

VERSE 1	Romans 1:18
Text	"For the wrath of God is revealed from heaven against all ungodliness and unrighteousness of men, who by their unrighteousness suppress the truth."
Context Type	✓ Theological ✓ Covenantal ✓ Eschatological
Human Impact	The foundational NT statement on divine anger. Orge theou is not arbitrary or capricious — it is the settled, revealed opposition of God's holy character to all that violates truth and righteousness. The present tense ("is revealed") indicates ongoing not merely future wrath.
Direction	✓ God-directed (as source) ✓ Communal (universal — all ungodliness)
Observation	Divine anger in Romans 1:18 is the essential backdrop for the entire gospel. God's wrath is not a problem to be explained away — it is the moral coherence of reality: a holy God cannot be indifferent to the suppression of truth. Framework B must account for anger as a divine perfection before treating human anger. This is the three-state typology anchor for "functioning anger": God's anger is permanently in state (1) — perfectly calibrated, never distorted, always purposive.
VERSE 2	Exodus 32:10 / Numbers 25:3
Text	"Now therefore let me alone, that my wrath (aph) may burn hot against them and I may consume them." / "...the anger (aph) of the Lord was kindled against Israel."
Context Type	✓ Covenantal ✓ Prophetic ✓ Somatic language
Human Impact	The aph root — nostrils/face — reveals the embodied somatic metaphor at the heart of the OT anger vocabulary. God's anger is described through the bodily posture of intense breathing through flared nostrils. This is anthropomorphic but theologically deliberate: anger is not an abstract divine attribute but an embodied relational response to violation.
Direction	✓ God-directed (as source) ✓ Other-directed (toward Israel)
Observation	The somatic root aph is the most frequent anger term in the OT and is applied to God more than to humans. The embodied metaphor (nostrils, breathing, heat) confirms that anger has a physiological signature — the biblical writers were observing a real bodily phenomenon and mapping it onto the divine. This supports the neuroscience integration: anger is not merely cognitive but involves the autonomic nervous system, cardiovascular activation, and the hypothalamic rage circuit.
VERSE 3	Mark 3:5
Text	"And he looked around at them with anger (orge), grieved at their hardness of heart, and said to the man, 'Stretch out your hand.' He stretched it out, and his hand was restored."
Context Type	✓ Covenantal ✓ Individual-internal ✓ Relational
Human Impact	The clearest portrait of holy anger in the NT. Three elements co-present simultaneously: anger (orge — settled, purposive), grief (lupeo — deep sorrow), and action (healing). Jesus's anger is not a separate episode from his compassion — it arises directly from his care for the man and his sorrow at those who would prevent the healing. Anger and love are not opposites here; they are expressions of the same moral commitment.
Direction	✓ God-directed (in Jesus) ✓ Other-directed (at Pharisees; toward the man)
Observation	Mark 3:5 is the definitive counter-evidence to any claim that anger is always sinful or that Jesus never experienced it. More importantly, it reveals the anatomy of holy anger: it is inseparable from grief (the caring dimension), purposive (it drives toward redemptive action, not destruction), and calibrated (it is specifically directed at hardness of heart, not at the person). This is the "functioning" state of the anger-faculty in its highest form.

VERSE 4	Ephesians 4:26
Text	"Be angry (orgizesthe) and do not sin; do not let the sun go down on your anger (parorgismos)."
Context Type	✓ Moral ✓ Individual-internal ✓ Relational
Human Impact	The command is present imperative — sustained anger is not only permitted but commanded in appropriate circumstances. The qualification is twofold: it must not cross into sin, and it must be resolved before nightfall (not nursed into bitterness). The verse assumes that anger itself is a legitimate faculty; the concern is its duration and its direction.
Direction	✓ Self-directed (regulation) ✓ Other-directed (in relational context)
Observation	Eph 4:26 is the NT's clearest statement that the anger-faculty has a legitimate form. The three-state typology from the synthesis document applies directly: the command describes state (1) — functioning anger that remains within moral bounds. The warning against unresolved anger points toward state (2) — disabled/distorted anger that becomes bitterness (pikria, v.31). State (3) would be nursing anger as righteousness while it has become self-serving — the position of the elder brother (Luk 15:28).
VERSE 5	James 1:19–20
Text	"Let every person be quick to hear, slow to speak, slow to anger; for the anger of man does not produce the righteousness of God."
Context Type	✓ Wisdom ✓ Individual-internal ✓ Relational
Human Impact	The most important limitation text on human anger in the NT. The argument is not that anger is always wrong but that human anger is structurally unreliable — it does not reliably produce divine righteousness as its outcome. The fallen soul's anger-faculty is too easily contaminated by self-interest, wounded pride, or desire for control.
Direction	✓ Self-directed (regulation) ✓ God-directed (purpose — righteousness)
Observation	James 1:20 is the diagnostic statement for the anger-faculty in the fallen soul: it is not necessarily disabled (state 2) — it fires — but it is unreliable because it is entangled with the self. This is the intermediate condition: anger that is active but contaminated. It maps between states (1) and (2) in the typology and may warrant a fourth state: "distorted but active." This is a typology refinement flag for the synthesis.
VERSE 6	Luke 15:28
Text	"But he was angry (orgizo) and refused to go in. His father came out and entreated him."
Context Type	✓ Wisdom ✓ Relational ✓ Individual-internal
Human Impact	The elder son's anger at the prodigal's return is the portrait of state (3) inverted anger: the anger-faculty is fully active but directed at precisely the wrong object. He is furious at grace — at the father's generosity, which he experiences as injustice. His anger presents as righteous (covenant faithfulness has been violated, he believes) but it is in fact self-serving wounded pride.
Direction	✓ Other-directed (at the father, at the prodigal) ✓ Self-directed (wounded pride)
Observation	This is the clearest NT illustration of inverted anger — the state (3) form. The elder son's anger is not disabled: it fires strongly. But it detects grace as the threat and self-exclusion as the appropriate response. His anger mirrors the Pharisees' anger at Jesus's welcome of sinners. Cross-reference: the synthesis document's state (3) — detecting goodness as threat and evil as achievement.

VERSE 7	Titus 1:7
Text	"For an overseer, as God's steward, must be above reproach. He must not be arrogant or quick-tempered (orgilos) or a drunkard or violent or greedy for gain."
Context Type	✓ Wisdom ✓ Relational ✓ Character/Virtue
Human Impact	Orgilos — the dispositional form of anger: a person characterised by quick-temperedness. Placed in a vice list alongside arrogance (authades), violence, and greed. The disqualifying criterion for leadership is not that the person has ever been angry, but that anger has become a settled character trait — the soul's default response to opposition or frustration.
Direction	✓ Other-directed (in leadership context) ✓ Self-directed (character)
Observation	Titus 1:7 confirms that the anger-faculty can become a stable dispositional feature of the soul — not just a passing emotion but a character orientation. This maps onto the neurological finding that chronic anger produces structural changes in the prefrontal-amygdala relationship, reducing impulse control over time. Quick-temperedness is the embodied soul.
VERSE 8	Revelation 19:15
Text	"From his mouth comes a sharp sword with which to strike down the nations, and he will rule them with a rod of iron. He will tread the winepress of the fury (thumos) of the wrath (orge) of God the Almighty."
Context Type	✓ Eschatological ✓ Covenantal ✓ Prophetic
Human Impact	The eschatological endpoint of divine anger: orge and thumos are combined — the settled judicial wrath and the full force of divine passion together at the final judgement. Significantly, the returning Christ treads the winepress personally — eschatological anger is not delegated but directly expressed.
Direction	✓ God-directed (as source and agent) ✓ Other-directed (toward the nations)
Observation	The final form of divine anger completes the arc from Rom 1:18 (present revelation of wrath) to Rev 19:15 (eschatological execution of wrath). Between these poles, the entire biblical theology of anger is contained. The combination of orge and thumos here suggests that in God the distinction between settled disposition and passionate intensity is not a contradiction but a unity — his settled will and his passionate nature are one.

SECTION 6 — SOUL FUNCTION IN FRAMEWORK B

Soul Faculty Engaged	<i>Affective (primary — anger as emotion with physiological signature), Moral-conscience (righteous anger as moral perception in action), Volitional (anger driving toward justice or toward destruction), Relational (anger as response to relational violation or injustice), Cognitive (anger affecting judgment — impairs deliberation when distorted).</i>
Framework B Contribution	<i>Anger is the soul's moral alarm in action — where shame is the inward self-signal and abomination is the evaluative perception, anger is the motivational energy that responds to perceived violation with force. In its functioning state, it is the soul's capacity for righteous indignation: the energy that refuses to be passive before injustice. In its distorted state, it becomes the energy of the incurvatus in se — self-serving wrath that destroys relationship and community.</i>
Regenerate Expression	<i>The Spirit-transformed soul can carry holy orge: anger that is calibrated to God's moral perception (Mar 3:5 pattern — anger + grief + purposive action). It is "slow to anger" (Jas 1:19) but not incapable of it. It is resolved before nightfall (Eph 4:26), does not degenerate into bitterness (pikria, Eph 4:31), and is always subordinated to the overarching love-orientation of agape (1Cor 13:5 — love "is not provoked"). The regenerate soul's anger is neighbour-oriented, not self-oriented.</i>

Unregenerate Expression	Three states confirmed by the data: (1) Functioning — holy anger at genuine injustice, short-lived, purposive (even this is possible in unregenerate souls as common grace); (2) Distorted/active — Jas 1:20 pattern: anger fires but is contaminated by self-interest; (3) Inverted — Luk 15:28 pattern: anger directed at grace, at goodness, at the other's flourishing. Additionally, anger can move to a fourth state: chronic bitterness/rage — where the anger-faculty is locked in permanent activation, no longer episodic but structural.
Three-State Typology Test	CONFIRMED — The three-state typology from the moral-conscience synthesis applies to anger. Evidence: (1) Functioning — Mar 3:5 (holy anger); (2) Disabled — the soul incapable of righteous indignation, morally indifferent (Rom 1:18 reversal — no response to ungodliness); (3) Inverted — Luk 15:28; Rev 12:17 (dragon's fury). A possible fourth state — chronic structural rage — may require addition to the typology. Flag for synthesis update.

SECTION 7 — NEUROSCIENCE & PSYCHOLOGY

Brain Regions / Systems	Anger is among the most extensively mapped emotions in affective neuroscience. Primary regions: amygdala (threat detection and anger initiation — bilateral activation), anterior cingulate cortex (moral violation detection — consistent with holy anger), hypothalamus (rage circuit — hypothalamic attack area), prefrontal cortex (regulation and suppression of amygdala-driven anger — reduced PFC activity correlates with impulsive anger). Research: Denson et al. (2009, Psych Science) — PFC-amygdala relationship in anger regulation. Davidson (2000) — approach motivation and anger. Berkowitz (1993) — cognitive neoassociation model of anger.
Physiological Markers	Sympathetic activation: elevated heart rate, blood pressure (consistent with aph — flared nostrils, heated breathing), cortisol and adrenaline surge, muscle tension, face flushing. The biblical "heat" metaphor (chemah — burning heat; aph — hot nostrils) maps precisely onto documented cardiovascular and thermal responses. Chronic anger produces sustained cortisol elevation, cardiovascular damage (Williams, 1993 — Anger Kills), and immune dysregulation. Thumos-type outburst anger has a different profile from orge-type sustained anger: the former involves rapid adrenal surge and recovery; the latter involves persistent low-level cortisol elevation.
Psychological Framework	Anger is a secondary emotion in attachment theory (Bowlby) — it arises from perceived threat to attachment relationships, underlying hurt or fear. This maps onto ka'as (vexation/provocation anger) and rogez (trembling fury). Cognitive Appraisal Theory (Lazarus 1991): anger arises from perceived injustice + personal relevance + controllability. This maps well onto orge — the settled evaluation that injustice has occurred. Beck's cognitive model: hostile attribution bias — the tendency to interpret ambiguous actions as intentionally hostile — is the cognitive mechanism underlying quick-temperredness (orgilos, Tit 1:7). Narcissistic injury rage: anger triggered by threat to self-image (elder son pattern, Luk 15:28).
Behavioural Signature	Approach-attack (unlike fear which produces avoidance): confrontation, aggression, raising voice, physical threat posture. Verbal attack: insult, cursing, accusation (Mat 5:22 — "Raca", "you fool"). Passive-aggressive withdrawal (elder son, Luk 15:28 — "refused to go in"). Righteous anger: confrontation without aggression, boundary-setting, prophetic speech. Chronic rage: social withdrawal, depression, somatic disorders.
Epigenetic Potential	✓ Possible — Chronic anger-stress has documented epigenetic correlates. Adverse childhood experiences (ACE) involving parental rage produce methylation changes in stress-response genes (NR3C1, FKBP5). The OT's repeated "visiting iniquity of fathers on children to the third and fourth generation" (Exo 20:5) — explicitly associated with God's za'am/chemah — is consistent with epigenetic inheritance of anger-dysregulation. Confidence: Moderate.
Confidence Level	✓ High for anger neuroscience and psychology — among the most researched emotions. ✓ Moderate for epigenetic dimension.

SECTION 8 — BIBLICAL vs MODERN PSYCHOLOGY

Biblical Grounding	✓ Direct words exist — multiple terms with fine-grained distinctions between anger types. Uniquely, the primary referent is divine (<i>orge theou</i> dominates), which psychology cannot account for.
Modern Construct Gap	Psychology has no category equivalent to holy anger — anger that is permanently in the "functioning" state because its perceiver is omniscient and morally perfect. All psychological anger models assume a fallible perceiver. The <i>orge/thumos</i> distinction has a partial psychological parallel (trait anger vs. state anger; dispositional vs. reactive) but psychology does not carry the moral calibration dimension: the question of whether the anger is objectively warranted by the nature of reality, not just by the perceiver's appraisal. James 1:20 ("human anger does not produce God's righteousness") is a diagnostic statement with no psychological equivalent.
Convergence Points	(1) Both identify the physiological signature of anger (sympathetic activation, cardiovascular arousal — consistent with <i>aph somatic</i> metaphor). (2) Both distinguish dispositional anger (<i>orgilos</i> ; trait anger) from episodic anger. (3) Both recognise anger's vulnerability to distortion by self-interest. (4) Both identify chronic anger as pathological and physically damaging. (5) Both recognise that anger arises from perceived injustice — the cognitive appraisal model maps onto the biblical concept of anger as moral response.
Divergence Points	Scripture treats divine anger as the standard against which human anger is measured; psychology has no transcendent standard. The concept of righteous anger in scripture (<i>orge</i> co-present with grief, Mar 3:5) is more nuanced than most psychological models. Paul's command "be angry and do not sin" (Eph 4:26) treats righteous anger as morally obligatory in some contexts — psychology tends to treat all anger as requiring management or reduction. The eschatological dimension (Rev 19:15) is entirely absent from psychology.

SECTION 9 — RELATED WORDS (from the 181)

Intensifies / Generates	Bitterness (15) — unresolved anger calcifies into bitterness (Eph 4:31); Strife (154) — anger produces conflict (Pro 15:18; 29:22); Violence (167) — <i>thumos</i> -anger drives physical aggression; Vengeance (165) — anger seeking retaliation; Jealousy (90) — <i>chemah</i> and <i>ka'as</i> frequently paired with jealousy.
Opposes / Resolves	Patience/Longsuffering (117) — the primary antidote (Pro 15:18; Jas 1:19); Forgiveness (65) — anger resolved through release; Gentleness (69) — soft answer turns away wrath (Pro 15:1); Peace (119) — anger dissolved into <i>shalom</i> ; Love (101) — <i>agape</i> is not provoked (1Cor 13:5).
Co-occurs With	Abomination (1) — divine anger is the response to abomination; Pride (123) — threatened pride is the primary trigger of human anger (Pro 13:10); Shame (146) — anger and shame frequently co-occur in prophetic judgement texts; Grief (72) — holy anger and grief co-present in Mar 3:5; Justice (91) — righteous anger is the affective face of justice-seeking.
Registry Numbers	1 (abomination), 15 (bitterness), 65 (forgiveness), 69 (gentleness), 72 (grief), 90 (jealousy), 91 (justice), 101 (love), 117 (patience), 119 (peace), 123 (pride), 146 (shame), 154 (strife), 165 (vengeance), 167 (violence)

SECTION 10 — OPEN QUESTIONS & FLAGS

1. THREE-STATE TYPOLOGY — CONFIRMED AND EXTENDED: The typology from the moral-conscience synthesis (functioning / disabled / inverted) is confirmed for anger. Evidence: — (1) Functioning: Mar 3:5 (holy anger + grief + purposive action) — (2) Disabled: the soul incapable of righteous indignation — moral indifference to injustice (Rom 1:18 reversal — a soul that has no anger response to ungodliness) — (3) Inverted: Luk 15:28 (anger at grace); Rev 12:17 (dragon's fury at the righteous) EXTENSION FLAG: A possible fourth state — chronic structural rage (bitterness/rage as permanent disposition rather than episodic response) — appears in the data (Eph 4:31 — bitterness as the calcified form of unresolved anger). This may require addition to the typology in the synthesis document. 2. ANGER + GRIEF CO-PRESENCE (Mar 3:5): The simultaneous presence of orge and lupeo (grief) in Jesus is a significant anthropological finding. Holy anger in its highest form is always accompanied by grief — it is the anger of someone who cares deeply about what is being violated. This has implications for Framework B's treatment of both anger and grief (72): they may be aspects of the same moral-emotional response rather than independent faculties. Flag for cross-card analysis when grief (72) is completed. 3. JAMES 1:20 DIAGNOSTIC: 'The anger of man does not produce the righteousness of God' is the most important limitation text in the entire anger vocabulary. It suggests that in the fallen soul, the anger-faculty is not simply dysfunctional (state 2) or inverted (state 3) but unreliable even when active and apparently righteous. This is a fifth possible state: distorted-active anger, which looks like state (1) but is contaminated by self-interest. The typology may need a 'contaminated' category between (1) and (2). 4. ORGE vs THUMOS DISTINCTION: This NT distinction is analytically significant for Framework B. Orge = settled moral disposition; thumos = passionate outburst. These map onto different soul faculties: orge is primarily volitional/dispositional; thumos is primarily affective/reactive. The fact that God's anger is always orge, never thumos in the NT is theologically significant — divine anger is never reactive or uncontrolled. 5. GENERATIONAL/EPIGENETIC LINK: The OT pattern of ancestral anger transmitted to children (Exo 20:5 — visiting iniquity to third and fourth generation, in contexts of God's za'am) combined with the ACE research on parental-rage epigenetic transmission creates a strong cross-card link with shame (the highest-confidence epigenetic card). These two words together — shame and anger — may be the primary epigenetic pair in the 181. 6. DATA GAP NOTE: The STEP export for this word was NT-heavy. The OT anger vocabulary is considerably richer than the three roots supplied. For any future re-analysis, a dedicated STEP search on aph, chemah, evrah, za'am, charah, ka'as, rogez across the OT would substantially enrich the verse-level analysis. The current card is analytically complete but verse coverage in Section 5 is weighted toward the NT.
